Content guideline for determining the reliability of a source "WP:Reliability" and "WP:RS" redirect here. For the WikiProject, see Wikipedia:Reliabil sources/Noticeboard. For a list of frequently discussed sources, see Wikipedia: Reliable sources/Perennial sources. This page documents an English Wikipedia content guideline. It is a generally accepted standard that editors should attempt to follow, though it is best treated with common sense, and occasional exceptions may apply. Any substantive edit to this page should reflect consensus. When in doubt, discuss first on the talk page.ShortcutsWP:RSWP:RELIABLEWP:RELIABLEWP:RELIABLITY This page in a nutshell: Wikipedia requires inline citations for any material challenged or likely to be challenged, and for all quotations. If you are new to editing and instead just need a general overview of how sources work, please visit the referencing for beginners help page. Wikipedia guidelines Guidelines Guidelines list Policies list Behavioral Assume good faith Conflict of interest Courtesy vanishing Disruptive editing bon't bite the newcomers Don't edit to make a point Etiquette Don't game the system User pages Other behavioral guidelines WMF friendly space policy Discussions Talk page guidelines Signatures Content Citing sources External links Reliable sources medicine Fringe theories Non-free content Offensive material Don't copy long texts Don't create hoaxes Patent nonsense Other content guidelines Editing Article size Be bold Edit summary Understandability Other editing guidelines Organization Categories, lists, templates Categorization Disambiguation Style Manual of Style contents lists tables Deletion Deletion Deletion process Speedy keep Deletion guidelines for administrators Project content Project pages WikiProjects Templates User pages User boxes Shortcuts Subpages Other Naming sure that all majority and significant minority views that have appeared in those sources are covered (see Wikipedia:Neutral point of view). If no reliabile sources can be found on a topic, Wikipedia:Verifiability, which requires inline citations for any material challenged or likely to be challenged, and for all quotations. The verifiability policy is strictly applied to all material in the mainspace—articles, lists, and sections of articles—without exception, and in particular to biographies of living persons, which states: Contentious material about living persons (or, in some cases, recently deceased) that is unsourced or poorly sourced whether the material is negative, positive, neutral, or just questionable—should be removed immediately and without waiting for discussion. In the event of a contradiction between this guideline and our policies relevant to sourcing are Wikipedia:No original research and Wikipedia:Biographies of living persons. For questions about the reliability of particular sources, see Wikipedia:Noticeboard. Overview Further information: unreliable sources, and many in the middle. Editors must use their judgment to draw the line between usable and unreliable sources. Articles should be based on reliable, independent, published sources with a reputation for fact-checking and accuracy. This means that we publish the opinions only of reliable authors, and not the opinions of Wikipedians who have read and interpreted primary source material for themselves. The following examples cover only some of the possible types of reliable sources and source reliability issues, and are not intended to be exhaustive. Proper sourcing always depends on context; common sense and editorial judgment are an indispensable part of the process. Definition of a source Further information: Wikipedia:Verifiability § Reliable sources ShortcutWP:SOURCEDEF The word "source" when citing sources on Wikipedia has three related meanings: The piece of work itself (the article, book) The creator of the work (the writer, journalist) The publisher of the work (for example, Random House or Cambridge University Press) Any of the three can affect reliability. Reliable sources may be published materials with a reliable publication process, authors who are regarded as authoritative in relation to the subject, or both. These qualifications should be demonstrable to other people. Definition of published "WP:PUBLISHED" redirects here. It is not to be confused with Wikipedia:Published (WP:PUBLISH). ShortcutWP:PUBLISHED The term "published" is most commonly associated with text materials, either in traditional printed format or online; however, audio, video, and multimedia materials that have been recorded then broadcast, distributed, or archived by a reputable party may also meet the necessary criteria to be considered reliable sources. Like text, media must be produced by a reliable source and be properly cited. Additionally, an archived copy to be accessible via the Internet. Context matters ShortcutsWP:CONTEXTMATTERSWP:RSCONTEXT The reliability of a source depends on context. Each source must be carefully weighed to judge whether it is reliable for the statement being made in the Wikipedia article and is an appropriate source for that content. In general, the more people engaged in checking facts, analyzing legal issues, and scrutinizing the writing, the more reliable the publication. Information provided in passing by an otherwise reliable source that is not related to the principal topics of the publication may not be reliable; editors should cite sources focused on the topic at hand where possible. Sources should directly support the information as it is presented in the Wikipedia article. Age matters ShortcutsWP:AGE MATTERSWP:RS AGEWP:OLDSOURCES Especially in scientific and academic fields, older sources may be inaccurate because new information has been brought to light, new theories proposed, or vocabulary changed. In areas like politics or fashion, laws or trends may make older claims incorrect. Be sure to check that older sources have not been superseded, especially if it is likely that new discoveries or developments have occurred in the last few years. In particular, newer sources are generally preferred in medicine. Sometimes sources are too new to use, such as with breaking news (where later reports might be more accurate), and primary sources are too new to use, such as with breaking news (where later reports might be more accurate). studies that attempt to replicate the discovery might be a good idea, or reviews that validate the methods used to make the discovery). With regard to historical events, older reports (closer to the event, but not too close such that they are prone to the errors of breaking news) tend to have the most detail, and are less likely to have errors introduced by repeated copying and summarizing. However, newer secondary and tertiary sources may have done a better job of collecting more reports from primary sources and resolving conflicts, applying modern knowledge to correctly explain things that older sources could not have, or remaining free of bias that might affect sources written while any conflicts described were still active or strongly felt. Sources of any age may be prone to recentism, and this needs to be balanced out by careful editing. Some types of sources, and Wikipedia: Verifiability § Verifiability § Reliable sources, and Wikipedia: Verifiability § Reliable sources, and Wikipedia: Verifiability § Verifiability § Reliable sources, and Wikipedia: Verifiability § Reliable sources, and Verifiability § Rel on scholarly material. When available, academic and peer-reviewed publications, scholarly monographs, and textbooks are usually the most reliable sources. However, some scholarly material may be outdated, in competition with alternative theories, or controversial within the relevant field. Try to cite current scholarly consensus when available, recognizing that this is often absent. Reliable non-academic sources may also be used in articles about scholarly issues, particularly material from high-quality material should be attributed in-text where sources disagree. Scholarship ShortcutWP:SCHOLARSHIP Articles should rely on secondary sources whenever possible. For example, a paper reviewing existing research, a review article, monograph, or textbook is often better than a primary sources for themselves (see Wikipedia:No original research and Wikipedia:Neutral point of view). Material such as an article, book, monograph, or research paper that has been vetted by the scholarly community is regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable, where the material has been published in reputable peer-reviewed sources or by well-regarded as reliable peer-reviewed as reli requirements for a doctorate, and which are publicly available (most via interlibrary loan or from Proquest), can be used but care should be exercised, as they are often, in part, primary sources. Some of them will have gone through a process of academic peer reviewing, of varying levels of rigor, but some will not. If possible, use theses that have been cited in the literature; supervised by recognized specialists in the field; or reviewed by independent parties. Dissertations in progress have not been vetted and are thus not reliable sources as a rule. Some these are usually preferable to the original thesis as sources. Masters dissertations and theses are considered mainstream academic discourse by checking what scholarly citation indexes or lists such as DOAJ. Works published in journals not included in appropriate to use will depend on the context. Isolated from mainstream academic discourse, though whether it is appropriate to use will depend on the context. Isolated studies are usually considered tentative and may change in the light of further academic research. If the isolated study is a primary source, it should generally not be used if there are secondary sources that cover the same content. The reliability of a single study depends on the field. Avoid undue weight when using single studies in such fields. Studies relating to complex and abstruse fields, such as medicine, are less definitive and should be avoided. Secondary sources, such as meta-analyses, textbooks, and scholarly review articles are preferred when available, so as to provide proper context. Care should be taken with journal is respected, or that any meaningful peer review occurs. Journals that are not peer reviewed by the wider academic community should not be considered reliable, except to show the views of the groups represented by those journals (notes 1] In recent years[when?] there has been a proliferation of new journals of very low quality that have only token peer-review if any (see predatory journals). These journals board is based in a respected accredited university, and that it is included in the relevant high-quality citation index—be wary of indexes that merely list almost all publications, and do not vet the journals they list. For medical content, more guidance is available at WP:MEDRS. News organizations ShortcutsWP:NEWSORGWP:RSEDITORIAL News sources often contain both factual content and opinion content. News reporting from well-established news outlets is generally considered to be reliable for statements of fact (though even the most reporting sometimes contains errors). News reporting from less-established outlets is generally considered less reliable for statements of fact. (Most newspapers also reprint items from news agencies such as Reuters, Interfax, Agence France-Presse, United Press International or the Associated Press, which are responsible for accuracy. The agency should be cited in addition to the publication (editorials) or outside authors (op-eds) are reliable primary sources for statements attributed to that editor or author, but are rarely reliable for statements of fact. Human interest reporting and accuracy (see junk food news).[6] When taking information from opinion content, the identity of the author may help determine reliability. The opinions of specialists and recognized experts are more likely to be reliable and to reflect a significant viewpoint.[notes 2] If the statement is not authoritative, attribute the opinion to the author in the text of the article and do not represent it as fact. Reviews for books movies, art, etc. can be opinion, summary or scholarly pieces.[7][8] Scholarly sources and high-quality non-scholarly sources are generally better than news reports for academic topics. Press releases from the organizations or journals are often used by newspapers with minimal change; such sources are churnalism and should not be treated differently than the underlying press release. Occasionally, some newspapers still have specialist reporters who are citable by name. With regard to biomedical articles, see also Wikipedia:Identifying reliable information about rumors may be appropriate (i.e. if the rumors themselves are noteworthy, regardless of whether or not they are true). Wikipedia is not the place for passing along gossip and rumors. Some news organizations have used Wikipedia articles as a source for their work. Editors should therefore beware of circular sourcing. [notes 3] Whether a specific news story is reliable for a fact or statement should be examined on a case-by-case basis. Multiple sources should not be asserted for any wire service article. Such sources are essentially a single source are case-by-case basis. Multiple sources should not be asserted for any wire service article. Such sources and last a news organization engages in fact-checking and has a reputation for accuracy are the publication of corrections and disclosures of conflicts of interest. Vendor and e-commerce sources ShortcutsWP:VENDORWP:AFFILIATE Although the content guidelines for external links prohibit linking to "Individual web pages that primarily exist to sell products or services," inline citations may be allowed to e-commerce pages such as that of a book on a bookseller's page or an album on its streaming-music page, in order to verify such things as titles and running times. Journalistic and academic sources if available. Rankings proposed by vendors (such as bestseller lists at Amazon) usually have at least one of the following problems: It may be impossible to provide a stable source for the alleged ranking. When only self-published by the vendor, i.e. no reliable independent source confirming the rankings are usually avoided as Wikipedia content. Biased or opinionated sources ShortcutsWP:BIASEDWP:PARTISANWP:BIASEDSOURCES See also: Wikipedia:Neutral point of view § Bias in sources, and Wikipedia:Neutral point of view for the present a neutral point of view for the present and wikipedia:Neutral point are the best possible sources for supporting information about the different viewpoints held on a subject. Common sources of bias include political, financial, religious, philosophical, or other beliefs. Although a source may be biased, it may be reliable in the specific context. When dealing with a potentially biased source, editors should consider whether the source meets the normal requirements for reliable sources, such as editorial control, a reputation for fact-checking, and the level of independence from the topic the source is covering. Bias may make in-text attribution appropriate, as in "Feminist Betty Friedan wrote that..."; "According to the Marxist economist Harry Magdoff..."; or "Conservative Republican presidential candidate Barry Goldwater believed that...". Questionable and self-published sources Main page: Wikipedia: Verifiability § Reliable sources are those with a poor reputation for checking the facts or with no editorial oversight. Such sources include websites and publications expressing views that are widely acknowledged as extremist, that are promotional in nature, or that rely heavily on rumors and personal opinions. [9] Questionable sources are generally unsuitable for citing contentious claims about third parties, which includes claims against institutions, persons living or dead, as well as more illdefined entities. The proper uses of a questionable source are very limited. Beware of sources that sound reliable but do not have the reputation for fact-checking and accuracy that this guideline requires. [10] The Journal of 100% Reliable Factual Information might have a reputation for "predatory" behavior, which includes questionable business practices and/or peer-review processes that raise concerns about the reliability of their journal articles.[11][12] Sponsored content is generally unacceptable as a source, because it is paid for by advertisers and bypasses the publication's editorial process. Reliable publications clearly indicate sponsored articles in the byline or with a disclaimer at the top of the articles. Sources that do not clearly distinguish staff-written articles from sponsored content are also questionable. Symposia and supplements to academic journals are often (but far from always) unacceptable sources. They are commonly sponsored by industry groups with a financial interest in the outcome of the research reported. They may lack independent editorial oversight and peer review, with no supervision of content by the parent journal.[13] Such shill articles do not share the reliability of their parent journal.[14] being essentially paid ads disguised as academic articles. Such supplements, and those that do not clearly declare their editorial policy and conflicts of interest, should not be cited. Indications that an article was published in a supplement may be fairly subtle; for instance, a letter "S" added to a page number, [15] or "Suppl." in a reference. [16] However, note that merely being published in a supplement may be fairly subtle; for instance, a letter "S" added to a page number, [15] or "Suppl." in a reference. [16] However, note that merely being published in a supplement may be fairly subtle; for instance, a letter "S" added to a page number, [15] or "Suppl." in a reference. [16] However, note that merely being published in a supplement may be fairly subtle; for instance, a letter "S" added to a page number, [15] or "Suppl." in a reference. [16] However, note that merely being published in a supplement may be fairly subtle; for instance, a letter "S" added to a page number, [15] or "Suppl." in a reference. [16] However, note that merely being published in a supplement may be fairly subtle; for instance, a letter "S" added to a page number, [15] or "Suppl." in a reference. [16] However, note that merely being published in a supplement may be fairly subtle; for instance, a letter "S" added to a page number, [15] or "Suppl." in a reference. [16] However, note that merely being published in a supplement may be fairly subtle published in a sponsored supplement. Many, if not most, supplements are perfectly legitimate sources, such as the Astronomy & Astrophysics Supplement. A sponsored supplement also does not necessarily involve a COI; for instance, public health agencies may also sponsor supplements. However, groups that do have a COI may hide behind layers of front organizations with innocuous names, so the ultimate funding sources should always be ascertained. Self-published sources (online and paper) ShortcutsWP:RSSELFWP:RSSEL published sources Anyone can create a personal web page or publish their own book and claim to be an expert in a certain field. For that reason, self-published sources are largely not acceptable. Self-published books and newsletters, personal pages on social networking sites, tweets, and posts on Internet forums are all examples of self-published media. Self-published expert sources may be considered reliable when produced by an established expert on the subject matter, whose work in the relevant field has previously been published by reliable, independent publications. Never use self-published sources as independent sources about living people, even if the author is an expert, well-known professional researcher, or writer. User-generated content ShortcutsWP:USERGENERATED Content from websites whose content is largely user-generated content include personal and group blogs (excluding newspaper and magazine blogs), content farms, Internet forums, social media sites, video and image hosting services, most wikis, and other collaboratively created websites. Examples of unacceptable user-generated sites are Wikipedia (self referencing), Twitter, Facebook, Tumblr, Instagram, Reddit, IMDb, Ancestry.com, Find a Grave, and ODMP. Although review aggregators (such as Rotten Tomatoes) may be reliable, their audience ratings based on the reviews of their users are not. In particular, a wikilink is not a reliable source. Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources on themselves ShortcutWP:SELFSOURCE See also: Wikipedia:Verifiability § Self-published or questionable sources as sources or the second secon used as sources of information about themselves, especially in articles about themselves, without the requirement that they be published experts in the field, so long as the following criteria are met: The material is neither unduly self-serving nor an exceptional claim. It does not involve claims about themselves, especially in articles about themselves, without the requirement that they be published experts in the field, so long as the following criteria are met: entities). It does not involve claims about events not directly related to the subject. There is no reasonable doubt as to its authenticity. The Wikipedia article is not based primarily on such sources. These requirements also apply to pages from social networking websites such as Twitter, Tumblr, and Facebook. Use of self-sourced material should be de minimis; the great majority of any article must be drawn from independent sources. Reliability in specific contexts Biographies of living persons Main page: Wikipedia: Biogra unsourced or poorly sourced should be removed immediately; do not move it to the talk page. This applies to any material related to living persons on any page in any namespace, not just article space. Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary, secondary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary and tertiary sources ShortcutsWP:RSPRIMARYWP:WPNOTRS Main page: Wikipedia:No original research § Primary and tertiary sources ShortcutsWP:WPNOTRS Main p tertiary sources Wikipedia articles should be based mainly on reliable secondary sources, i.e., a document or recording that relates or discusses information originally presented elsewhere. Reputable tertiary sources, such as introductory-level university textbooks, almanacs, and encyclopedias, may be cited. However, although Wikipedia articles are tertiary sources, Wikipedia employs no systematic mechanism for fact checking or accuracy. Thus, Wikipedia articles (and Wikipedia employs no systematic mechanism for fact checking or accuracy. When editing articles in which the use of primary sources}} and {{primary source material by Wikipedia editors. When editing articles in which the use of primary sources}} and {{primary source mater be used to mark areas of concern. Medical claims ShortcutWP:RS/MC Main page: Wikipedia:Identifying reliable sources (medicine) Ideal sources, such as reputable medical journals, widely recognised standard textbooks written by experts in a field, or medical guidelines and position statements from nationally or internationally reputable expert bodies. It is vital that the biomedical information in all types of articles be based on reliable, independent, published sources and accurately reflect current medical knowledge. Quotations ShortcutWP:RS/QUOTE Further information: Wikipedia:Manual of Style § Quotations The accuracy of quoted material is paramount and the accuracy of quotations from living persons is especially sensitive. To ensure accuracy, the text of quoted material is best taken from a reliable secondary source (ideally one that includes a citation to the original). No matter where you take the quoted text from, it is important to make clear the actual source of the text, as it appears in the article. Partisan secondary sources should be viewed with suspicion as they may misquote or quote out of context. In such cases, look for neutral corroboration from another source. Any analysis or interpretation of the quoted material, however, should rely on a secondary source (see Wikipedia: No original research). Academic consensus ShortcutWP:RS/AC A statement that all or most scientists or scholars hold that view. Otherwise, individual opinions should be identified as those of particular, named sources. Editors should avoid original research especially with regard to making blanket statement in Wikipedia that academic consensus exists on a topic must be sourced rather than being based on the opinion or assessment of editors. Review articles, especially those printed in academic review journals that survey the literature, can help clarify academic consensus. Usage by other sources use a given source provides evidence, positive or negative, for its reliability and reputation. The more widespread and consistent this use is, the stronger the evidence. For example, widespread doubts about reliability weigh against it. If outside citation is the main indicator of reliability, particular care should be taken to adhere to other guidelines and policies, and to not represent unduly contentious or minority claims. The goal is to reflect established views of sources as far as we can determine them. Statements of opinion, but not for statements asserted as fact. For example, an inline qualifier might say "[Author XYZ] says....". A prime example of this is opinion pieces in sources recognized as reliable. When using them, it is best to clearly attribute the opinions in the text to the author and make it clear to the reader that they are reading an opinion. Otherwise reliable news sources—for example, the website of a major news organization—that publish in a blog-style format for some or all of their content may be as reliable as if published in standard news article format. There is an important exception to sourcing statements of fact or opinion: Never use self-published books, zines, webforums, blogs and tweets as a source for material about a living person, unless written or published by the subject of the biographical material. "Self-published blogs" in this context refers to persons § Reliable sources and Wikipedia:Biographies of living persons § Reliable sources and Wikipedia:Biograph Wikipedia: Biographies of living persons § Avoid gossip and feedback loops See also: Wikipedia: Notability (events) § Breaking news Breaking news persons § Avoid gossip and feedback loops See also: Wikipedia can and should be up to date, but Wikipedia is not a newspaper and it does not need to go into all details of a current event in real time. It is better to wait a day or two after an event before adding details to the encyclopedia, than to help spread potentially false rumors. This gives journalists time to collect more information and verify claims, and for investigative authorities to make official announcements. The On the Media Breaking News Consumer's Handbook[17] contains several suggestions to avoid spreading unreliable and false information, such as distrusting anonymous sources; seeking eyewitness reports, as well as reports attributed to other news media; seeking multiple sources; seeking eyewitness reports, as well as reports attributed to other news media; seeking eyewitness reports, as well as reports attributed to other news media; seeking eyewitness reports, as well as reports attributed to other news media; seeking eyewitness reports, as well as reports attributed to other news media; seeking eyewitness reports, as well as reports attributed to other news media; seeking eyewitness reports sourced to initial news reports should be immediately replaced with better-researched ones as soon as they are published, especially if those original reports contained inaccuracies. All breaking-news stories, without exception, are primary sources, and must be treated with caution: see Wikipedia:No original research § Primary, secondary and tertiary sources. When editing a current-event article, keep in mind recentism bias. The {{current}}, {{recent death}}, or another current-event to alert readers to the fact that some information in the article may be inaccurate, and to draw attention to the need to add improved sources as they become available. These templates should not be used, however, to mark articles on subjects or persons in the news; if they were, hundreds of thousands of articles would have such a template, but to no significant advantage (see also Wikipedia:No disclaimers in articles). Headlines ShortcutsWP:HEADLINESWP:RSHEADLINES News headlines including subheadlines—are not a reliable source if the information in the headline is not explicitly supported in the body of the source. Headlines are written to grab readers' attention quickly and briefly; they may be overstated or lack context, and sometimes contain exaggerations or sensationalized claims with the intention of attracting readers to an otherwise reliable article. They are often written by copy editors instead of the researchers and journalists who wrote the articles. Deprecated sources Main page: Wikipedia: Deprecated sources Are deprecated on Wikipedia. That means they should not be used, unless there is a specific consensus to do so. Deprecation happens through a request for comment, usually at the reliable sources noticeboard. It is reserved for sources that have a substantial history of fabrication or other serious factual accuracy issues (e.g. promoting unfounded conspiracy theories), usually when there are large numbers of references to the source giving rise to concerns about the integrity of information in the encyclopaedia. A deprecated source should not be used to support factual claims. While there are exceptions for discussion of the source's own view on something, these are rarely appropriate outside articles on the source itself. In general articles, commentary on a deprecated source's opinion should be drawn from independent secondary sources. Including a claim or statement by a deprecated source that is not covered by reliable sources risks giving undue weight to a fringe view. Some sources are blacklisted, and can not be used at all. Blacklisting is generally reserved for sources which are added abusively, such as state-sponsored fake news sites with a history of addition by troll farms. Specific blacklisted sources can be locally whitelisted; see Wikipedia: Template messages/Cleanup/Verifiability and sources lists many templates, including {{notability}} – adds: The topic of this article may not meet Wikipedia's general notability guideline. Please help to demonstrate the notability of the topic by citing reliable secondary sources that are independent of the topic and provide significant coverage of it beyond a mere trivial mention. If notability cannot be shown, the article is likely to be merged, redirected, or deleted. Find sources: "Reliable sources" – news · newspapers · books · scholar · JSTOR (Learn how and when to remove this template message) {{citation needed}} – adds: [citation needed] {unreliable source?} – adds: [citation needed] {unreliable source?} – adds: [citation needed] {unreliable source?} knowledge External links/Perennial websites How to mine a sources Reliable sources (§ Appendix: Reliable sources, a list of frequently discussed sources List of academic databases and search engines List of online newspaper archives The Wikipedia Library, a program for accessing paywalled resource Exchange/Resource Applying reliability guidelines Cherrypicking Children's, adult new reader, and large print sources Dictionaries as sources (phrase doesn't mean what you think it does) Frequently misinterpreted sources (natural sciences) Identifying and using tertiary sources Identifying and using tertiary sources Identifying and using style guides NPOV means neutral editing, not neutral editing, not neutral editing, not neutral editing, not neutral editing and using tertiary sources Identifying and using tertiary sources Identifying and using style guides NPOV means neutral editing, not neutral editing, not neutral editing, not neutral editing and using tertiary sources Identifying and Identifying and Identifying and Identifying Identifying Identifying Identifying Identifying Identifying Identifying Identifying Identifying Ident and predatory publishing Wikipedia clones Other Change detection and notification Current science and technology sources News sources Reliable sources quiz Source criticism Wikipedia Signpost/2008-06-26/Dispatches — Signpost article WikiProject Reliability Notes ^ Examples include The Creation Research Society Quarterly and Journal of Frontier Science (the latter uses blog comments as peer review Archived 2019-04-20 at the Wayback Machine). ^ Please keep in mind that any exceptional claim would require exceptional sources, and this is policy. ^ A variety of these incidents have been documented by Private Eye and others and discussed on Wikipedia, where incorrect details from articles added as vandalism or otherwise have appeared in newspapers References ^ Beall, Jeffrey (1 January 2015).
